

**ABSTRACT**  
for  
**METHOD AND SYSTEM IN A TELEPHONE SWITCHING SYSTEM**

Method and system for dynamically modifying access right profiles in the operating system of a computer system or a telephone switching system. In the method, access right profiles having individual command rights to the operating system of the computer system are defined in the computer or telephone switching system. According to the method, the need for modification of the access right profiles in the computer system is recognized; the information contained in the access right profiles is read; the access right profiles which have to be modified are determined; and the access right profiles are modified dynamically as necessary in view of the need for modification that has been recognized.
